

AMENDMENTS TO THE SPECIFICATION

IN THE ABSTRACT OF THE DISCLOSURE:

Please replace the Abstract of the Disclosure currently of record with the attached new Abstract of the Disclosure.

IN THE SPECIFICATION:

Please amend paragraph [0029] as follows:

--[0029] The structure and operation of a brake 1' associated with an electric motor driven chain hoist 2', according o Figure 6, are exactly the same as those of the manually operated system, except that a shaft 4a' of the electric motor rotor 4' as well as an extension 4b' thereof form a drive shaft and the second cam part 6, the brake disc/clutch disc arrangement 9, 10, 8, a driven input shaft 7' of a hoisting apparatus 2' and the hoisting apparatus 2' itself are arranged between an electric motor 3' and the first cam part 5 on the drive shaft 4b' in such a manner that the second cam part 6 with the components 8, 9 fastened thereto may rotate therein and move axially and the input shaft 7' of the driven hoisting apparatus 2' may rotate, since the rotor 4' is placed on the opposite side of the system compared with the manually operated system shown in Figures 1 to 4 so that the extension 4b' of the shaft 4a' of the rotor 4' has to move through the input shaft 7'. Parts 25' and 26' of a body 13' of the brake are also shaped differently but operate similarly.--
